It can be rather tedious scrolling up and down in the play list to find a song. Added letter buttons to improve on maneuverability in the play list. Here is how they work:

B	N
C	O
D	P
E	Q
F	R
G	S
H	T
I	U
J	V
K	W
L	X
M	Y

- If you are looking for a title that starts with the letter "K", click on the "K" letter
- The playlist will be at the first "K" listing
- After looking through the "K" listings, click on your **browsers return icon** and you will be back at the letter selection buttons
- Both the "Rock" and "Country" playlists have this feature
- You can still use the following options for finding a title or artist

Finding a song by the title is straightforward, they are listed alphabetically. But what if you wanted to see if your favorite **ARTISTS** are on the play list, here's how:
Microsoft Internet Explorer 6:

- On the top left of the browser, click on EDIT
- Slide down to Find (on This Page)… Ctrl+F and click
- A find window will appear

Find ? X

Find what: Elvis Presley   Find Next

☐ Match whole word only   Direction: ○ Up ● Down   Cancel
☐ Match case

- Type in the artist name and click find next
- As the name is found on the play list, it will be highlighted

- While looking at the play list (or any web page), hold the control key and press "F" (Ctrl+F)
- The following window will open:

- Type in the artist name or title and click next
- As the name is found on the play list, it will be highlighted

Mozilla Firefox:

- On the top left of the browser, click on EDIT
- Slide down to Find in This Page... Ctrl+F and click
- A task bar will appear on the bottom of the screen

- Type in the artist name and click find next
- As the name is found on the play list, it will be highlighted

I am familiar with these two browsers, but other browsers should offer the same features.

If someone is using a different browser, send me the info for finding on a web page and I will post it here.

Don't forget to check "**Additions to the play list**" for new songs added since your last log in.

Andy
